the skills needed to perform a specific army job such as artillery or engineering at your ait school you'll receive hands on training and field instruction to make you an expert in that career field. Job training for a combat engineer requires 14 weeks of one station unit training which includes basic combat training and advanced individual training. Part of this time is spent in the classroom and part takes place in the field with on-the-job instructions. One station unit training is 14 weeks at Fort Leonard Wood, MO. Updated August 3, 2023.

If you enjoy construction and have an interest in enlisting in the military, a combat engineer career may be right for you. Combat engineers are in charge of building or destroying certain objects to protect the troops and get them safely to their destination. To become a combat engineer, you'll need to go through basic combat training (BCT) and advanced individual training (AIT). During BCT, you'll learn the basics of army life, including physical fitness, marksmanship, and tactical skills. To become a combat engineer in the army, you must first complete basic training, which lasts for ten weeks. After basic training, you will attend advanced individual training (AIT) which focuses on combat engineering skills. AIT lasts for 14 weeks, during which you will learn skills such as building and repairing roads, bridges, and buildings.

Marine Corps Engineer School (MCES) trains entry-level marines and develops engineer leaders while providing explosive hazards and improvised threat training capabilities. you'll provide expertise and come up with quick and creative engineering solutions constructing fighting positions fixed and floating bridges and obstacles and defense positions. Requirements include 14 weeks of one station unit training which combines basic training and advanced individual training.

Combat engineers are required to go through 14 weeks of one station unit training which combines basic training and advanced individual training. According to the Army's MOS overview, the United States Army's Sapper Microsite, and the United States Army:

Introduction
A sapper, also known as an elite combat engineer, is a combatant skilled in a variety of military engineering duties, such as minefield placement or clearing bridge building.

Combat engineers facilitate the mobility of friendly forces while impeding that of the enemy. They also work to assure the survivability of friendly forces by constructing fighting positions, fortifications, and roads. They conduct demolition missions and clear minefields manually or through the use of specialized vehicles.

Army engineers have the choice between specializing in combat engineering, general engineering, or geospatial engineering. Operations training is a combination of classroom lessons and practical work out in the field. MOS 12B receive their engineering training at Fort Leonard Wood in Missouri.
