**Managerial Accounting** 2011-01-03 We assess the research publication productivity of Canadian-based accounting researchers in highly ranked accounting journals for the 2001-13 period. Our research provides important benchmarks for use by individual researchers and universities for matters such as promotion and tenure decisions. For example, each Canadian-based faculty member had approximately 0.50 of a weighted article for the 13-year period and 45 percent of all accounting faculty members published at least once in a top 10 accounting journal. We also provide an overview of the type of research being published by Canadian-based researchers in each of the top 10 journals. Financial accounting, managerial audit, tax or other, and we assess how productivity at top 10 journals has changed over time in supplemental analyses. We compare and contrast the productivity of the 15 male and 15 female academics that publish most in top 10 accounting journals to assess the breadth of outlets being used beyond top 10 outlets including Financial Times, 45 journals, accounting journals ranked A and B, non A and B non accounting peer-reviewed journals, and non peer-reviewed outlets. The supplemental analysis also helps to shed light on the finding from this paper and prior research that women are less likely to be represented on lists of those with most publications in highly ranked accounting journals by comparing the two groups of researchers across a variety of institutional and other factors.
