brilliant home networking for the over 50s is a visual quick reference book that shows you how to make the most of your home computers by networking them. It will give you a solid grounding on how to choose the right network for you, how it works, and how to get the best out of it. A complete reference for the older beginner and intermediate user who is less experienced and confident working with the technology. Just as one car isn’t enough for most households, one computer isn’t going to fulfill the needs of a family. An older couple or a retired person setting up a wired or wireless home network is well within the reach of the average person over the age of 50 who hasn’t grown up with the technology. He or she chooses the right setup for their needs. Brilliant home networking for the over 50s will describe common network configurations and guide you step by step through the process of getting your PCs connected to the internet and to each other. You’ll learn the ins and outs of Ethernet, Wi-Fi, IP addresses, and file sharing. You’ll discover how to go wireless so you can work from anywhere in the home. Finally, you’ll explore ways to keep your network and your self and younger family users secure from hackers, viruses, and other threats. Brilliant home networking for the over 50s provides a visual tutorial taking you from networking novice to accomplished user in easy steps. A guide to optimizing your use of a wired or wireless home network making a more integral and essential part of your life. Essential guidance on the vast array of software and peripheral hardware available to you allowing you to make the right choices for how you want to work in most IT system development processes. The identification or elicitation of user requirements is recognized as a key building block in practice. The identification of user needs and wants is a challenge and inadequate or faulty identifications in this step of an IT system development can cause huge problems with the final product. The elicitation of user requirements as such changes according to age groups, gender, cultural settings, and into time and experience in the use of the system. Software user requirements therefore cannot be used between projects, it systems, and different software that makes the elicitation of user requirements an inherent part of any software development project and a resourceful activity as well. This book provides insights to the process of identifying user requirements and to different types by describing varying case studies in which technologies or software have been developed. A variety of user requirements are provided illustrating the effect of changing the targeted user group with respect to age to the context and the different technologies or software as well as to the difference in viewpoint on ways of involving users in the elicitation process. Cases and user requirement elements discussed in the book include user requirements elicitation processes for children, construction workers, and farmers. User requirements for personalized services of a broadcast company. Variations in user involvement, practical elements of user involvement, and requirements elicitation. Usable security requirements for design of privacy. Singapore’s leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.
