Visual Hydrology 2004-05-31 one approach to the introduction of computational material to the classroom is to supplement a textbook with modern computer codes. Unfortunately, most codes are expensive, designed for commercial use without source code, and may require special software. Visual hydrology provides a cheaper and simpler alternative by supplying computational exercises that can be fully assimilated by students and allowing them to activate understanding. It reproduces modern computer code, providing the source code for worked examples numerically and showing how worked examples can be used with alternative data. It describes and references the underlying theory, providing additional exercises with each worked example. It uses Microsoft Excel software alone, requiring only basic knowledge of Microsoft Excel.

This primer teaches the use of modern and readily available computer code for engineering computation. Visual hydrology demonstrates codes for common and practical examples used in hydrological engineering and will be a valuable resource to students, research workers, and consulting engineers in the water-related sector. Spectrum - Part 1: Curriculum 2020-11-01 This product includes the curriculum of the structured training and treatment program Spectrum. It is intended to train all patients who have an indication for using an RTCGM system. The diabetes teams have the flexibility to adjust the content depending on the needs, possibilities, and limitations of the patients. CGM helps handle complex metabolic problems and enables patients to live a more flexible lifestyle. Patients can only unlock the full potential of a sensor-based intensified insulin therapy with pens or with pump therapy if they receive proper training to optimally use the displayed CGM information and sensibly vary the alarm settings. Spectrum is best suited for use in group training. The group should be 2-4 maximum, with 5 patients in groups with more than 5 participants. The risk exists that certain aspects might not be delved into enough, such as aspects which apply to individual participants. The individual evaluation of CGM data or characteristics of the different CGM systems is the training material is suitable for individual consultation. Although this then lacks the helpful effects of the synergy of the group upon completing Spectrum, patients with diabetes have the knowledge to safely and successfully use a CGM system. Contrary to a product training, Spectrum places the focus not on the device characteristics but rather on the therapeutic use of the measurement results and the practical use of the systems in daily life. Patients learn how to understand the information given by the CGM device and how to properly use the alarm functions and how to draw the correct therapeutic conclusions.
