Reforming the Coroner and Death Certification Service a Position Paper 2003 unraveling a twenty five
year tale of multiple murder and medical deception the death of innocents is a work of first rate
journalism told with the compelling narrative drive of a mystery novel more than just a true crime
story it is the stunning expose of spurious science that sent medical researchers in the wrong
direction and nearly allowed a murderer to go unpunished on July 28, 1971, a two and a half month old
baby named Noah Hoyt died in his trailer home in a rural hamlet of upstate New York. He was the fifth
child of Waneta and Tim Hoyt to die suddenly in the space of seven years. People certainly talked but
Waneta spoke vaguely of crib death. There was plenty of unease but over time the talk faded nearly
two decades later. A district attorney in Syracuse, New York, was alerted to a landmark paper in the
literature on sudden infant death syndrome (SIDS). That had been published in a prestigious medical
journal in 1972. Written by a prominent researcher at a Syracuse medical center, the article described
the brief lives and sudden deaths of N.H. and his sister M.H., part of a family in which three other
children had died suddenly without explanation. The more the D.A. pushed and probed, the more he was
convinced something was very wrong about this account. It was the start of an intensive quest by a
team of investigators and it came to its climax on April 20, 1995, when after a dramatic trial Waneta
Hoyt was found guilty of the murder of all her children. But this book is more than a vivid account of
infanticide. Revealed here is also a riveting medical detective story. That journal article by a charismatic
doctor had legitimized the deaths of the last two babies by theorizing a cause for the mystery of SIDS
suggesting it could be predicted and prevented. And fostering the presumption that SIDS runs in
families. In the years thereafter, this theory became the prevailing wisdom about SIDS. Every new
parent's nightmare. More than two decades of studies have failed to confirm any of these widely
accepted premises. How this happened could have happened is a compelling story of high stakes
medical research in action. And the enigma of familial SIDS has given rise to a special and terrible irony
Today there is a maxim in forensic pathology: One unexplained infant death in a family is SIDS; two is
very suspicious; three is homicide.
Paper Cigarette 2019-03-11 the damages scotland act 1976 provided that claims by the immediate family of a person who died as a result of personal injury were extinguished if the injured person settled his claim before he died as a result of that provision victims of mesothelioma had to decide whether to obtain compensation while they were still alive or leave the claim to be pursued after their death by their relatives who could stand to receive larger awards of damages in these circumstances many mesothelioma sufferers did not pursue their own claims in order that their relatives could obtain more generous compensation after their death in 2007 an act was passed to resolve this particular problem but it became evident that there were other areas that required similar attention it was in this context that scottish ministers invited the scottish law commission to undertake this review
