guide for emergency physicians providing all the information needed to diagnose and treat common and uncommon pediatric disorders dr brian edwards is a lipidologist he has completed a year long case study on himself he has eaten 60 of fat while on a very low carbohydrate diet during this year long period he has been on cruise ships for 90 days these are the end points of his study 1 ldl particle number 2 weight 3 calc calcium score of coronary arteries 4 cimt ultrasound of carotid intimal wall 5 hemoglobin a1c for diabetes while this is only a case study of one dr edwards proposes these end points to be used in future studies to answer the question as to which diet is healthy during the course of the year dr edwards learned an extremely important concept the reduced obese state based on this concept dr edwards is introducing a new term to describe why diet fail in maintenance phase the sponge syndrome finally dr edwards discovered the greatest hindrance to low carbohydrate diets cross country driving which causes prolonged sitting while driving for eight hours the prolonged sedentary state is one of the key opportunities for weight gain in someone who has lost weight this is one component of many compensatory mechanisms of the sponge syndrome which cause people in the reduced state to gain weight it is time for americans and their physicians to learn that there is more to do to prevent heart attacks and strokes everyone must learn the difference between ldl c and ldl p and non hdl cholesterol the tubby factor everyone must learn what a calcium score and a carotid intima thickness ultrasound does to detect subclinical atherosclerosis my book the tubby theory from topeka teaches the above and demonstrates how i used the above tests to prevent heart disease and stroke and to also regress plaque in the arteries in my medical practice in topeka for the last two years my goal is to change the paradigm of preventive medicine in america the new paradigm is to find subclinical atherosclerosis early with a calcium score and a cimt to then treat it to stabilize the vulnerable plaque from inflammation and rupture rupture of the plaque causes sudden death in 1 of 3 patients sudden death is the first sign of heart disease reference lipoprotein management in patients with cardiometabolic risk brounell et al jacc 2008 51 1513 tim russert died one year ago of solomon md director noninvasive cardiology at brigham and women's hospital echocardiography is a manual skill unlike other imaging techniques where a patient is positioned and a technician may press a series of buttons echocardiography requires that a skilled operator apply a transducer manually to a patient's thorax moreover as echocardiography is not a tomographic technique the images obtained are neither uniform nor guaranteed to be of a certain quality or even spatial location hence the quality of the images obtained is directly dependent on that operator's skill and experience the success of the examination begins and ends at the hands of the person holding the transducer echocardiography pocket guide the transthoracic examination by bernard bulwer and jose rivero provides an highly commended in the anaesthesia category of the 2014 BMA Medical Books Awards. Reviews altogether this textbook offers an excellent detailed overview of basic principles, mechanics and physics of technical equipment used in anaesthesia and intensive care. Feb 2014 this book is excellent. I have read a number of equipment related books and found most of them stale and filled with minutia instead. This fresh look at equipment really makes it interesting to read and keeps your attention with sections that give quick answers to how things work, advantages and disadvantages, in an easy to read format. You get exactly what you want to know right away. In addition, the full color photos and well done charts really add to the depth of this book. It is my opinion this may be one of the best books on the market for quick review of anaesthesia and critical care equipment. Let's be honest, no one is sitting at home reading equipment books for pleasure. So when you need the information, you likely need it right away. This book does exactly that: easy format, clear and concise information with everything you need to know about a piece of equipment. Easy to find and within a page or two. I would recommend this to all trainees in anaesthesia but also for those providers who like to be prepared in the operating room to deal with any issue that might arise. Nurse anesthesia.org 8 Feb 2014. Equipment in anaesthesia and critical care specifically follows the syllabus published by the Royal College of Anaesthetists and is the perfect guide for candidates studying for their FRCA qualifications. The book is beautifully illustrated and features high quality colour photographs throughout. The text is engaging and comprehensive, relating each piece of equipment back to its basic physics, mechanics and clinical context. The clear concise and standardised format means that information is easy to access and perfect for revision. Every major piece of equipment is featured alongside colour photos, reproducible line diagrams and information on its uses, how it works, pros and cons and safety considerations. The authors, all senior registrars in anaesthesia and critical care, appreciate exactly what candidates need to know to pass the FRCA exam. They have identified and tackled difficult subjects which are often glossed over or omitted in other resources to produce a book that is comprehensive, engaging and to the point. In addition to FRCA candidates, the book is also suitable for operating department practitioners, critical care staff and physicians with an interest in anaesthesia or critical care.
