Crime scene photography is a book wrought from years of experience with material carefully selected for ease of use and effectiveness in training and field tested by the author in his role as a forensic services supervisor for the Baltimore County Police Department. While there are many books on non-forensic photography, none of them adequately adapt standard image-taking to crime scene photography. The forensic photographer must know how to create an acceptable image that is capable of withstanding challenges in court. This book blends the practical functions of crime scene processing with theories of photography to guide the reader in acquiring the skills, knowledge, and ability to render reliable evidence. Required reading by the IAI Crime Scene Certification Board for all levels of certification, this book covers over 500 photographs and covers the concepts and principles of photography as well as the how-to of creating a final product. Includes end of chapter exercises.

**Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child’s education by doing it yourself. The well trained mind will instruct you step by step on how to give your child an academically rigorous comprehensive education from preschool through high school, one that will train him or her to read, to think, to understand, to be well rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the Trivium, which organizes learning around the maturing capacity of the child’s mind and comprises three stages: the elementary school grammar stage, in which the building blocks of information are absorbed through memorization and rules; the middle school logic stage, in which the student begins to think more analytically; and the high school rhetoric stage, where the student learns to write and speak with force and originality. Using this theory as your model, you’ll be able to instruct your child whether full time or as a supplement to classroom education, in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in The Well-Trained Mind to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. The well-trained mind will give you the tools you’ll need to teach your child with confidence and success.**
