Solution-focused practice around the world provides an exploration of the diverse uses of SF and offers fascinating insights into how the solution-focused approach is currently used in many applications around the globe. Bringing together prominent authors, practitioners, and trainers, the collection is divided into five sections: theory, therapeutic applications, working with children and adolescents, coaching, and working with organizations. Originating from the first international conference on solution-focused practice spanning all applications of the approach, the chapters provide a grounding in the theory and practice and an exploration of the breadth and depth of solution-focused therapy. All practitioners of the solution-focused approach globally, as well as those working in the wider fields of therapy, social work, education, coaching, and human resources, will benefit from this text and the applicability of the inherent theories to their area of expertise. To help clients with autism think differently about their future, practitioners need to think differently about autism. Solution-focused practice is founded on a firm belief that the full potential of every human being can be realized. This concise, pragmatic guide explains how the practice can be effectively adapted to help clients on the autism spectrum find solutions to their problems by addressing autism not as a disability but as a different way of thinking. The first section is a...

Methodological discussions and includes new sections of case study material and information on supporting action research. The book raises issues about how action research is theorised whether it is seen as a spectator discipline or as a real life practice and how practitioners position themselves within the debate. It discusses the importance for educators of understanding their own work and showing how their educative influence can lead to the development of good orders in formal and informal learning settings and in the wider community. This second edition comes at a time when after years of debate over what counts as action research, it is now considered an acceptable and useful part of mainstream research practice. This clearly written textbook introduces the reader to the three styles of programming, examining object-oriented imperative, functional, and logic programming. The focus of the text moves from highly prescriptive languages to very descriptive languages, demonstrating the many and varied ways in which we can think about programming designed for interactive learning both inside and outside of the classroom. Each programming paradigm is highlighted through the implementation of a non-trivial programming language demonstrating when each language may be appropriate for a given problem. Features include review questions and solved practice exercises with supplementary code and support files available from an associated website. Provides the foundations for understanding how the syntax of a language is formally defined by a grammar, examines assembly language programming using COCO, introduces C standard, ML, and Prolog, describes the development of a type inference system for the language Small, long-term solutions for a short-term world, demonstrates the complexity of the challenges that poor countries face and introduces the readers to the concept and impact of participatory research for development. Participatory research requires researchers to work with communities, governments, and other relevant actors to deal with common problems. Finding solutions requires participants to reflect critically on the cultural, economic, historical, political, and social contexts within which the issue under investigation exists. The book contains a collection of essays from development researchers and professionals each of whom is an activist who has made significant contributions to the struggles of the poor in their own societies. Essays are presented as case studies, and in each, the contributor explains the specific development problem the paths followed to solve the problem, lessons learned as a result of the research, and the development challenges on the horizon. In his field of research, together these essays present a fascinating picture of how some of today's most pressing development issues are being dealt with through research demonstrating how interdisciplinary and alternative approaches.

can be implemented in new and innovative ways. Optimization methodologies are fundamental instruments to tackle the complexity of today’s engineering processes. Engineering Optimization 2014 is dedicated to optimization methods in engineering and contains the papers presented at the 4th International Conference on Engineering Optimization ENGOpt2014 Lisbon, Portugal 8-11 September 2014. The book will be of interest to engineers, applied mathematicians, and computer scientists working on research development and practical applications of optimization methods in engineering. Between 2001 and 2004, the washing of mineral and organic N and P in long-term experiments on two different soils, sand loess and loam, with different soil preparation was determined. Conventional plowing, minimal soil preparation, land use, farmland, grassland, and fertilization with mineral and organic fertilization were evaluated. The concentrations of mineral nitrogen NO₃-N, NH₄-N, and PO₄-P were highest at the end of winter, while PO₄-P concentrations were highest in late summer. There was no pronounced seasonal trend in the concentrations of organic nitrogen and P. The proportion of ammonium N to the total N in the leachate of the sandy soil was highest, approximately equal after mineral and organic fertilization on the loess soil. The proportion of organic P to the total P in the leachate of the sandy soil was highest, 47% after gilled fertilization and 27% after mineral fertilization. On the grassland in Soest, the proportion of organic P to the total P was 15% in the leachate of the loess soil. It was observed that the concentrations of organic N decreased when the concentrations of organic P increased, which indicates that organic N...

Solution focused therapy is an evidenced based practice that focuses on creating conversations that build solutions rather than solve problems. Learning solution focused therapy an illustrated guide teaches readers how to practice and become competent in conducting solution focused therapy an area of growing interest as the emphasis on brief therapy increases. Critical to the book's learning strategy is the generous use of case illustrations that are detailed, rich, and instructive without being overly didactic. The case approach provides an effective means for seeing concepts put into practice and since medicine is becoming more patient focused the solution focused therapy model is highly relevant. Organized to show how a solution focused interview is conducted the book presents the basic model and goes on to apply this model in psychopharmacology, addiction supervision, and consultation. Each chapter combines readings, solution focused questions, case illustrations, learning exercises, and video demonstrations available online which together constitute a comprehensive course in this therapeutic modality. Moreover, the author's conversational writing style makes the tenets and techniques accessible and interesting to a wide variety of clinicians. Learning solution focused therapy an illustrated guide will appeal to clinicians who wish to enhance their skills and support their patients' growth in a positive way.

dass organische N-Verbindungen unabhängig von organischen P-Verbindungen ausgewaschen werden in den meisten Situationen nahm auch die Konzentration an NO\textsubscript{3}-N immer dann ab, wenn die PO\textsubscript{4}-Konzentration zunahm. In diesen Situationen ist ein höherer Beitrag von Makroporen preferential Flow am Auswaschungsprozess anzunehmen. Das PO\textsubscript{4}/NO\textsubscript{3} Verhältnis im Sickerwasser aller Standorte war generell im Spätsommer am höchsten und überdurchschnittlich hoch im nassen Jahr 2002. Aus diesen Beobachtungen wird geschlussfolgert, dass das PO\textsubscript{4}/NO\textsubscript{3} Verhältnis als ein Indikator für einen stärkeren Beitrag von Makroporen und preferential Flow an der Auswaschung angesehen werden kann.
