unfortunately we human beings do not come with a ready made owner s manual to guide us through our individual life
journeys so we are left with the task of finding or creating one of our own this book is the result of the author s own
personal search for just such a set of guidelines he offers it to you the reader as a possible starting point for your own
personal search owner s manual homo sapiens is a step by step guide designed to help the serious traveler on the journey
of life to identify his or her life goals to create a plan for achieving them and to begin putting those plans into effect. It is written in plain, everyday language and is broken down into bite-sized, easy-to-digest chapters. The book is divided into a number of segments, beginning with the basics which suggests an overall life goal of personal happiness and provides a review of the underlying principles of human development. Next comes three segments that help the reader to begin to find the answers to three important questions: who am I, which uses a brief quiz game to identify the reader’s personality type; what do I want, which uses a short fill-in-the-blanks worksheet to clarify values; and how can I get it, which provides a detailed blueprint to aid personal development.

it has been claimed that the natural sciences have abstracted for themselves a material world set apart from human concerns and social sciences in their turn constructed a world of actors devoid of things while a subject such as archaeology by its very nature takes objects into account other disciplines such as psychology emphasize internal mental structures and other non material issues this book brings together a team of contributors from across the social sciences who have been taking things more seriously to examine how people relate to objects the contributors focus on every day
objects and how these objects enter into our activities over the course of time using a combination of different theoretical approaches including actor network theory ecological psychology cognitive linguistics and science and technology studies. The book argues against the standard notion of objects and their properties as inert and meaningless and argues for the need to understand the relations between people and objects in terms of process and change.

Wheels under our feet is the story of three restless young people who junk the society's syllabus for finding love and decide to follow their heart. Ishaan, a popular college-going boy wants nothing but just a love in his life. The rest, he's going to figure out along the way. Anvita, a quintessential girl next door, has been around the block a few times and knows the scene and all. Sana, who's dying to break open her bars and fly, knows what's right for her but a little experimenting never hurt anybody. Did it when their lives crisscross their beliefs get challenged and their love gets tested. We all want it all the love the attraction the relationship the commitment but when we get it it may not be in the way we recognize.

this book is about the functions of technical artefacts material objects made to serve practical purposes objects ranging
from tablets of aspirin to concorde from wooden clogs to nuclear submarines more precisely the book is about using and designing artefacts about what it means to ascribe functions to them and about the relations between using designing and ascribing functions in the following pages we present a detailed account that shows how strong these relations are technical functions cannot be properly analysed without taking into regard the beliefs and actions of human beings we contend this account stays deceptively close to common sense after all who would deny that artefacts are for whatever purpose they are designed or used as we shall show however such intentionalist accounts face staunch opposition from other accounts such as those that focus on long term reproduction of artefacts these accounts are partly right and mostly wrong and although we do take a common sense position in the end it is only after sophisticated analysis f thermore the results of this analysis reveal that technical functions depend on a larger and more structured set of beliefs and actions than is typically supposed much work in the succeeding pages goes into developing an appropriate action theoretical account and forging a connection with function ascriptions
