*Correctional Mental Health* 2010-11-03 presenting a comprehensive framework for conducting a scientifically grounded violence risk assessment. This book is authoritative, current, and practical. The essentials of doing this type of evaluation are reviewed and available risk appraisal instruments are described for general violence, sexual violence, and spousal violence. The authors provide expert advice on choosing suitable instruments and approaches for particular cases. Interpreting the resulting data and communicating with legal decision makers, a detailed outline shows how to organize assessment findings into an effective final report. A sample completed report is featured in the appendix.

making them available to future generations of statisticians, mathematicians and scientists from the reviews of a user's guide to principal components the book is aptly and correctly named a user's guide; it is the kind of book that a user at any level novice or skilled practitioner would want to have at hand for autotutorial for refresher or as a general purpose guide through the maze of modern PCA technometrics. I recommend a user's guide to principal components to anyone who is running multivariate analyses or who contemplates performing such analyses. Those who write their own software will find the book helpful in designing better programs; those who use off-the-shelf software will find it invaluable in interpreting the results. ERDA Energy Research Abstracts 1983 public debate has stimulated interest in finding greater compatibility among forest management regimes the debate has often portrayed management choices as tradeoffs between biophysical and socioeconomic components of ecosystems here we focus on specific management strategies and emphasize broad goals such as biodiversity wood production and habitat conservation while maintaining other values from forestlands desired by the public we examine the following proposition commodity production timber nontimber forest products and the other forest values biodiversity fish and wildlife habitat can be simultaneously produced from the same area in a socially acceptable manner based on recent research in the pacific northwest we show there are alternatives for managing forest ecosystems that avoid the divisive arena of either or choices much of the work discussed in this book addresses two aspects of the compatibility issue first how are various forest management practices related to an array of associated goods and services second how do different approaches to forest management affect relatively large and complex ecosystems
